antibiotics, and then after completing IV therapy, 62% of these patients were prescribed 2 oral agents, 27% were prescribed 1 oral agent, and 11% were not prescribed any sequential therapy.

---

### Management of Community-Acquired Pneumonia in Adults

For hospitalized adults with nonsevere CAP who do not have risk factors for *P. aeruginosa* or MRSA, the guideline recommends empiric treatment with a beta-lactam plus a macrolide or with a respiratory fluoroquinolone. For patients who have documented allergies or contraindications to both macrolides and fluoroquinolones, a third option is combination therapy with a beta-lactam and doxycycline.
